

SMARTOWHO ANNOUNCES NEW UPDATES IN LABORO TO ENABLE STUDENTS AND PROFESSIONALS TO ENABLE BETTER COLLABORATION.

With this new feature “White Screen” is to be launched in Lasboro v4.1, Universities can brainstorm ideas, illustrate, collaborate and teach better.

SmartWho is consistently trying to solve, improve and outperform the Learning Management System the Laboro. It is because of our ability to keep up with the user feedback we are able to reach more than 1 million users within a year after the launch. Now, this whiteboard feature helps the teachers to reach a newer level of interaction with their students that couldn't happen before. We did have a smartboard feature which was just a rip-off from the regular whiteboard in the regular classrooms. With this version update, a professor can call upon a student onto the stage and solve problems together. There is a PIP video during the session makes it much more interesting to interact. We know that waiting for the faculties for the session to start to just boring, so we have introduced mini-games to play while students wait for their profession. The whiteboard has a mini-board feature, where students can form small teams of their own and play our inbuilt games like Dungeons and Dragons, Ping Pong, Volleyball, Racing, etc., or can create a game of their own. Well, this will be till the teacher arrives, as soon as that students will run back to their seats. This sounds exciting right. We had a blast while developing them for you. See you around early June.

Well, the traditional approach to these mundane routines of the universities and schools to teach their curriculum makes students drop out of these calls very frequently. Online classes affected their ability to focus. Our primary goal is to make them stay and we want to go all-in with technology.

Imagine a faculty calling someone on the stage to solve a problem, or a team gathering around and using a whiteboard all at once. And we can look at each other while doing it. Well does it sound familiar? This is what happens in the offline world. We wanted to bridge that gap. Get as close to this experience as sitting in the comfort of your home, or at any place with a good internet connection. We went beyond that! Now waiting can also be fun with the interactive mini-board feature, students further divide the existing room into smaller rooms to play games, while they wait for teachers to start the session or discuss the agenda before the meeting starts. They even have the feature to make these mini rooms private. Sounds similar? No way! We are the first to introduce it in the market.

“Education only be fun with the right tools. And Laboro is just the right tool. It's the only tool.”

Visit our official page and download the app for free. This feature is available in the free version as well. Or be a part of the 7-day beta testing contact awesometesters@smartoswho.io

Some of our initial beta testing testimonials are:

“Where was this my whole life?”

“This deeper level of interaction with people virtually is a revolutionary change.”

“I didn’t know the waiting could be this fun!!”
